

EasyAudit: The Winning Recipe for IT Security

EasyAudit WEB

- We check the security of your domain, application or CMS.
- We score your site's vulnerability from 1 to 10 using the main risk assessment standards.
- We test custom applications and platforms such as WordPress, Joomla, Magento, SilverStripe, ZenCart and OpenCart.

EasyAudit NET

- We check the external network, up to eight IPs or more.
- We assess the security of services, servers and network devices.
- We verify that firewalling and VPN rules are applied correctly.
- Within one week, we prepare a precise report that is understandable even for

non-specialists.

Who We Are and How We Work

- We are a collective intelligence of professionals with more than ten years of experience.
- We use recognized methodologies: OWASP, OSSTMM and PTES.
- We use professional licenses, application checks such as SQL Injection and XSS, and Open Source tools.
- We combine automation and human input in a hybrid model.

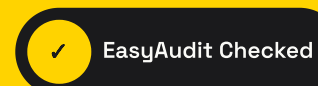

Why We Cost Less

A complete security consultancy can cost too much for an SME. EasyAudit reduces cost and time by using advanced technologies and adding manual intervention where needed.

Want to know if your company is truly protected?

EasyAudit checks applications, infrastructure and e-commerce platforms with a clear, concrete audit designed to turn technical risks into simple decisions.
